Binary-derived HgCdTe impurity audit — no alloy-gap fitting
A. Reference choice changes the inferred inversion
B. The CdTe band-edge derivative does not settle
Binary chord
Full T counted twice
Reference-corrected mass cubic
Interpolated common-mode mass (eV)
0.165
0.332
Cd fraction x
Gap-side detuning 0 meV
Gap-side detuning 1 meV
Gap-side detuning 10 meV
$-\partial_E T_8$ (dimensionless)
Mesh points per reciprocal direction
